

Motorized Rotation Stage Selection Guide

Motorized rotation stages are precision positioning products designed and built over many decades of experience in providing solutions to research and academia, industry and defense markets. Applications of Rotation Stages include semiconductor wafer inspection or scribing, metrology, micro-robotics, sensor testing, disk texturing, optics positioning like polarizers, waveplates, etc. Newport rotation stages offering ranges from the direct drive, direct read, high rotation speed RGV series to the multi-use low-cost NSR1 Universal Rotator, with over 100 model numbers to choose from. Vacuum versions, as well as multiple axis designs, OEM or custom solutions are available upon request.

Motorized rotation stages can be selected based on Minimum Incremental Motion, Bi-directional Repeatability, Accuracy, Maximum Speed, Wobble, Load Capacity, etc.

Series	Minimum Incremental Motion($^{\circ}$)	Bi-directional Repeatability($^{\circ}$)	Accuracy($^{\circ}$)	Maximum Speed($^{\circ}/s$)	Wobble(μrad)	Normal Load Capacity (Cz)(N)

RGV-S

High-Speed Precision Rotation Stage

- Direct drive for outstanding speed of up to 1000 deg/s and high reliability.
- Large diameter, steel ball bearings for stiffness, low runout and high load capacity.
- Precision glass scale encoder for high position repeatability, MIM, and high accuracy.
- High torque DC brushless motor with a maximum torque of 112 Nm.

The RGV series are compact, direct-drive rotation stages that provide ultra-fast rotation with very high MIM and outstanding positioning performance. Features include: a direct drive motor which ensures operational reliability due to no wear, high precision glass scales for position repeatability and large diameter bearings for stiffness and low runout. The RGV can be used in positioning or as a spindle. Applications include semiconductor wafer inspection, micro-robotics, precision metrology and motion simulators, specifically for MEMS, gyros and accelerometer testing. The RGV is compatible with the XPS controller with driver options depending on speed and torque requirements.

General Specifications

	RGV100BL-S	RGV100HL-S	RGV160BL-S
Travel Range (°)		360 continuous	
Max. Speed (no load) (°/s)		720	1000
Minimum Incremental Motion (mdeg)		0.10	0.04
Centered Load Capacity (N)		100	2700
Bi-directional Repeatability, Typical ⁽¹⁾ (mdeg)		±0.15	
Uni-directional Repeatability, Typical (Guaranteed) ⁽¹⁾ (mdeg)	±0.08 (±0.15)	±0.10 (±0.15)	±0.05 (±0.15)
Accuracy, Typical (Guaranteed) ⁽¹⁾ (mdeg)		±3.0 (±5.0)	na (±7.5)
Wobble, Typical (Guaranteed) ⁽¹⁾ (μrad)	±5.0 (±10)	±7.0 (±20)	±5.0 (±10)
Eccentricity, Typical (Guaranteed) ⁽¹⁾ (μm)		±1.0 (±1.5)	±0.8 (±2.0)
Inertia (no load) (kg.m ²)	0.00104	0.00123	0.02411
Weight (kg)	2.6	3.6	17.5
MTBF	20,000 with 5 kg load, 720 °/s speed and a duty cycle of 30%		20,000 with 90 kg load, 1,000 °/s speed and a duty cycle of 30%
CE		Compliant	
Aperture Diameter (mm)	30		110

(1) For difference between typical and guaranteed specifications see Motion Control Metrology Primer at www.newport.com

NOTE

The following specifications are controller/drive dependent. Refer the RGVxxx-S page on www.newport.com for specifications achievable with specific Newport controller/drive combination.

- MIM
- Accuracy
- Repeatability
- Max Speed
- Max Acceleration

Recommended Motion Controller:

XPS-RL see page 153

XPS-D see page 148

Driver cards and cable kits to be ordered separately.
Please refer to Stage to Controller compatibility chart on page 146.

RV Series

High-Performance Precision Rotation Stages

- Ideal for high load applications with up to 6500 N load and torque capacity of 80 Nm
- All steel construction offers high stiffness and thermal stability
- Over 50 different versions with varying performance characteristics, diameters, and vacuum compatibility
- Double row ball bearings -Ground worm gear with self compensating preload
- Largest aperture ranging from 78 to 280 mm

The RV Series rotation stages provide high-precision angular positioning accuracy combined with high load capacity. There are five stage sizes and six drive configurations available, optimizing load capacity, torque, speed and resolution for a variety of operating conditions. All RV stages are constructed of tool steel, with rotation accuracy ensured by ground bearing surfaces. A double row of preloaded bearings allows for high off-center loads in a reduced footprint, and the single monolithic design improves stiffness without compromising dynamic performance. The larger models, RV120BPP to RV350BPP, feature a worm mounted rotary encoder for improved accuracy and repeatability and the full-step BPE version is equipped with a reduction gear providing higher torque. The DC motor-driven CCHL and HAHLT versions are equipped with a reduction gear providing higher torque and payload inertia capacity. The HAT and the HAHLT feature a high-resolution direct reading encoder and tachometer for superior repeatability, position stability and speed regulation.

Load Characteristics

	RVS80	RV120	RV160	RV240	RV350
Cz, Normal centered load capacity (N)	900	1800	2700	4000	6500
a, construction parameter (mm)	30	40	50	70	100
b*, (mm) except HAT & HAHLT	39	53	57	59	73
b*, (mm) for HAT & HAHLT		71	75	77	91
k, radial compliance ($\mu\text{rad}/\text{Nm}$)	3.5	1.5	0.6	0.3	0.1
Q_H , Off-center load, vertical rotation axis			$Q_H \leq Cz / (1+D/a)$		
Q_V , Off-center load, horizontal rotation axis			$Q_V \leq Cz 2 / (1+D/a)$		

* Construction parameter = Distance between the top surface of the RV stage and the bearing center.

Example:

Q_V at a distance of 80 mm from the top surface for a RV160HAT rotation stage,
 $D = 80 \text{ mm} + 75 \text{ mm} = 155 \text{ mm}$:

$$Q_V = 2700 \text{ N} / 2 / (1 + 155 \text{ mm} / 50 \text{ mm}) = 329 \text{ N}$$

This Azimuth/Elevation gimbal system positions a 350 mm dia. mirror that can be used for laser based qualification and characterization of precision optical sensors, LIDAR analysis, or target tracking.

RVU Series**RVU Series – High Angular Stiffness Rotation Series**

- 100:1 harmonic drive box provides high torque & good sensitivity
- Vacuum compatible versions for use in ISO 7 clean environment
- All steel construction offers high stiffness and thermal stability

The RVU rotation stages are designed to meet the specifications of large mirror mounts which require high torque, rigidity, and sensitivity.

URS Series

scan QR code
to watch video

- Economical, general purpose
- Flexible preloading system guarantees backlash-free operation
- Tilted worm screw arrangement and 4 symmetric mounting holes provide better support for cantilevered loads with a smaller footprint
- Vacuum compatible version available

URS Series provide precision 360° continuous motion in a low profile package. URS Series stages feature: a proprietary ball bearing with exceptional stiffness, high reliability, minimal wobble and eccentricity; a tilted worm screw arrangement to allow 4 symmetric mounting holes, providing better support for cantilevered loads; adjustable limit switches to prevent over-travel (except for URS50B); and a flexible preloading system to guarantee backlash-free operation with an MTBF of 20,000 hours. The DC motor version features an ultra-high resolution encoder, 8,000 cts/rev, mounted on the worm screw, ensuring excellent bi-directional repeatability and high accuracy motion. The DC motor versions provides the highest dynamic speed range and allows rotation speeds up to 80 °/s. The stepper motor version is an economical solution for less demanding applications and with its high output torque, minimizes any risk of lost steps, providing good linearity between the stage's motion and commanded steps. The URS is also available in vacuum compatible versions down to 10e-6hPa. Additionally the CONEX-URS50BCC is the URS50BCC rotational stage with the integrated CONEX-CC controller/driver and is pre-configured for the highest level of out-of-the-box control. The CONEX-CC is a very compact and inexpensive driver for Newport's low power DC servo motor driven devices.

URB100CC

High-Speed Belt-Driven Rotation Stage

- Belt driven version of URS series offers higher rotation speeds without sacrificing life time expectancy
- 720°/s maximum speed
- Most economical for its high speed
- Designed for high speed with small footprint
- Economic motor mounted rotary encoder with 0.01° resolution

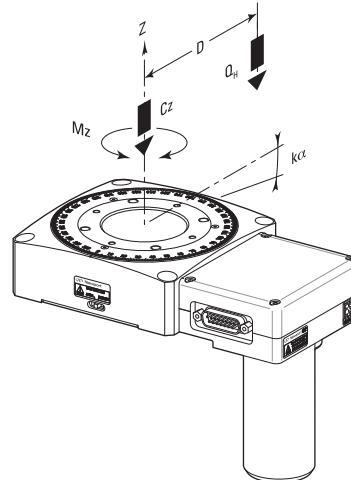

The URB100CC rotation stage is a high-speed, belt driven rotation stage. It is engineered for applications requiring fast moves over larger angles or continuous rotation at very high duty cycles, with high precision requirements. Features include: the belt drive which provides high rotational speeds of up to 720°/s; a proprietary four point contact ball bearing and 2-piece design to provide exceptional stiffness and high reliability while minimizing wobble and eccentricity; an enhanced low-profile package to ensure easy top down mounting. Typical applications for the URB stage are LIDAR, 3D imaging, or film thickness measurements of semiconductor wafers.

MODEL URB100CC

FCR100

Intelligent Stepper Motor Rotary Stages

- Value-engineered
- Proven and robust construction
- Space-saving (no separate controller box)
- Plug and play
- Easy connection via the USB or directly via RS-422

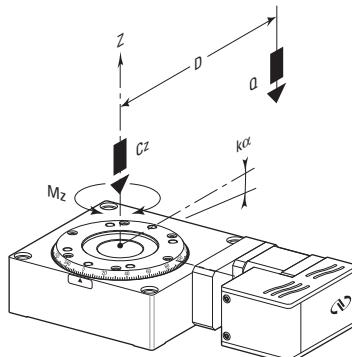

The FCR100 rotation stage combines a fully integrated stepper motor controller (iPP™ technology) and precision rotation stage in a small footprint. Similar to the CONEX series for DC motor, the FCR100 comes fully pre-configured and enables true out-of-box control. The iPP™ technology used in the FC series completely eliminates controller or driver set up, allowing users to simply connect USB communication, plug in the power supply and start the motion GUI. Features of the FCR100 includes: robust construction of crossed roller bearing for high position accuracy and the stepper motor directly attached to the worm screw providing high output torque. Up to 4 FC series units can be daisy-chained and controlled by a single GUI, via USB or direct RS-422 interface.

General Specifications

	FCR100
Travel Range	360°
Load Capacity	300 N
Maximum Speed	20°/s
Maximum Torque	0.5 Nm
Minimum Incremental Motion	0.00025°
Uni-directional Repeatability, Guaranteed	0.002°

PR50 & SR50 Series

Compact Rotation Stages

- Compact, low-profile rotation stage for 1 in. diameter optics
- Lightweight, folded motor design
- Proprietary ball bearings provide smooth motion with low wobble
- high speed or high resolution versions

The SR50 and PR50 Series are compact, lightweight rotation stages designed for optical components up to 1" in diameter, such as polarizers, wave plates, or wedges. The SR50 stages provide high precision rotation with Minimum Incremental Motion of 0.004° with either DC servo or open-loop stepper motors. The PR50 stages are a cost-efficient alternative to the SR50 for applications that do not require precision of the SR50 or that could benefit from higher speeds up to 20°/s. SR50/PR50 feature: a lightweight, low profile design with the proprietary ball bearings to provide smooth rotation with minimal wobble ($\pm 50 \mu\text{rad}$); a precision ground worm gear producing consistent driving torque to the rotating carriage; an internally foldered motor provides a small footprint for easy integration in the optics path. Typical applications include rotation of optical elements in confined spaces, such as laser cavities, disk texturing machines, or fiber optics component manufacturing.

The CONEX SR50CC and PR50CC are rotation stages with the integrated CONEX-CC controller/driver and is pre-configured for the highest level of out-of-the-box control. The CONEX-CC is a very compact and inexpensive driver for Newport's low power DC servo motor driven devices.

BG Series

Goniometric Cradles

- $\pm 45^\circ$ transverse axis rotation with maximum free access to the rotating platform
- Stacked cradles provide orthogonal rotation about the same pivot point
- Precision machined ball bearing races assure smooth motion and high stability
- Precision ground worm gear provides 0.002° MIM
- Vacuum compatible versions up to 10^{-6} hPa

BG Series Goniometric Cradles are designed to provide precision transverse axis rotational motion with maximum free access to the rotating platform and an MIM to 0.0002° . BG stages can be stacked for two-axis rotation about the same pivot point. Mounting a rotation stage under the assembly adds a third orthogonal rotation axis through the same point. Features include: a precision ground, hardened worm gear drive for high accuracy rotation; single row ball bearings and precision ground tool-steel races to ensure smooth rotational motion with minimal wobble and eccentricity; and a home switch conveniently located at the center of travel. BG Series goniometric cradles are available in 5 sizes and may be configured with DC motors (CC) or stepper motors (PP with mini-step or PE with full-step), depending on the applications. These highly versatile stages can be used for applications with high loads or torques, vacuum applications and compact multi-axis rotation assemblies.

The CONEX-BGS50CC is a goniometric cradle stage with the integrated CONEX-CC controller/driver and is pre-configured for the highest level of out-of-the-box control. The CONEX-CC is a very compact and inexpensive driver for Newport's low power DC servo motor driven devices.

Agilis™ Series**Piezo Motor Driven Rotation Stages**

- Highly repeatable angular motion
- High sensitivity (MIM)
- Compact size
- Affordable with quick delivery
- Integrated and easy to set up

The Agilis Series of high precision miniature rotation stages feature Newport's Agilis piezo step direct motor. Agilis stages provides the benefits of ultra-high adjustment sensitivity and convenient remote operation at a price and size comparable to that of a high quality manual stage. Agilis rotation stages include both compact conventional piezo rotation stages and goniometers. The compact and light weight AG-PR100 and CONEX-AG-PR100P rotation stages feature 1" apertures with retaining rings and are ideal for continuous rotation of waveplates and polarizers. The CONEX-AG-PR100P is based on the Agilis AG-PR100 rotary stage, but features an innovative miniature direct read encoder, providing 0.002° uni-directional repeatability. The CONEX-AG-GON Series gonimeters provide easy access to the tip/tilt platform and can be stacked for multi-axis rotations.

Uni-directional Repeatability, Typical	0.002 °
Uni-directional Repeatability, Guaranteed	0.002°
Accuracy, Typical	0.08°
Bi-directional Repeatability, Typical	0.003°
Wobble, Typical	100 µrad
Cable Length	1.8 m
Control Loop	Digital PI loop at 100 Hz servo rate
Operating Temperature	10 to +35 °C
Transversal Stiffness	200 µrad/Nm
Computer Interfaces	USB
Weight	135 g

Ordering Information

Model	Description
AG-PR100	Agilis Piezo Driven Rotation Stage, 1 inch ⁽¹⁾
AG-PR100V6	Vacuum Compatible Piezo Rotation Stage, Agilis ⁽¹⁾
CONEX-AG-PR100P	Piezo Motor Rotation Stage, 1 in., Direct Encoder, Includes Controller
CONEX-AG-GON-UP	Goniometer, Direct Encoder Feedback, CONEX Controller
CONEX-AG-GON-LP	CONEX Goniometer, Direct Encoder Feedback and Integrated Controller
AG-PR100-TP	Top Plate, CONEX-AG-PR100P, Mount AG-LS25 Stages or GON goniometers
RSA-1TI	Solid Insert for RSP-1T Rotation Stage
PRA-05	Polarizer Adaptor, 12.7 mm Optics to 1.063-20 Threaded Mounts
AG-MD4-1.2	Agilis Extension Cable, 1.2 m, 4-wire mini-DIN connector
USB-CH ⁽²⁾	USB Power Supply, Includes clips for US, EU, UK & Australia, 2m Cable

⁽¹⁾ One A-1.25-1RR retaining ring is included with every stage.

⁽²⁾ The USB-CH is required only with AG-UC2 and only if power is not available from a PC.

Recommended Motion Controllers

CONEX-AG-GON-LP shown

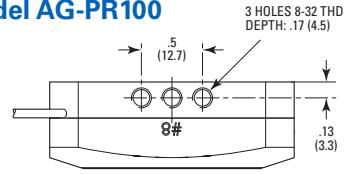

CONEX-AG-GON-LP and CONEX-AG-GON-UP assembly shown

	CONEX-AG-GON-UP	CONEX-AG-GON-LP
Travel Range	±7.5°	±5.5°
Drive Type	Piezo Motor	
Stage Type	AG-GON-UP	
Normal load capacity (N)	3.5 N	
Maximum Speed	0.45°/sec	0.33°/sec
Minimum Incremental Motion	0.00032°	0.00025°
Uni-directional Repeatability, Guaranteed	0.00064°	0.0005°
Origin repeatability ⁽¹⁾	0.00064°	0.0005°
Encoder Resolution	0.00013°	0.00009°
Cable Length	1.8 m	
Control Loop	Digital PI loop at 100 Hz servo rate	
Operating Temperature	10 to +35 °C	
Computer Interfaces	USB	
Weight	171 g

Picomotor™ Rotary Stages

Model 8401

- Compact design
- 0.7 μ rad angular resolution
- Picomotor™ actuators
- Set-and-forget long-term stability
- Easy-to-use, flexible controller/drivers

With a resolution better than 0.011° and an overall thickness of just 0.63" (16.0 mm), the compact Picomotor™ Rotary Stages can be used for a number of applications, including positioning wave plates and polarizers. Each rotary stage includes an adapter for mounting components with a 1" (25-mm) diameter. For motorized beam-steering applications, use our 45° adapter model 9922. For applications requiring high accuracy and repeatability, the 8410 Closed-Loop Picomotor Rotary Stage includes an encoder for superior position feedback. The closed-loop version provides microradian level of precision and continuous 360° rotation.

Specifications

	8401 (-M)	8410
Optic Diameter	25.4 mm	25.4 mm
Maximum Speed	1-2 RPM	1-2 RPM
Angular Resolution	0.2 N	2 μ rad
Thread Type	5 μ rad	8-32
Centered Load Capacity	4.4 N	4.4 N
Operating Temperature	+10 to +35 °C	10 to 45 °C

Ordering Information

Model	Description
8401(-M)	Picomotor Rotary Stage, Stainless Steel, 1 in. With 0.5 in. Adapter
8410	Closed-Loop Picomotor Rotary Stage, 1 in. Diameter Components

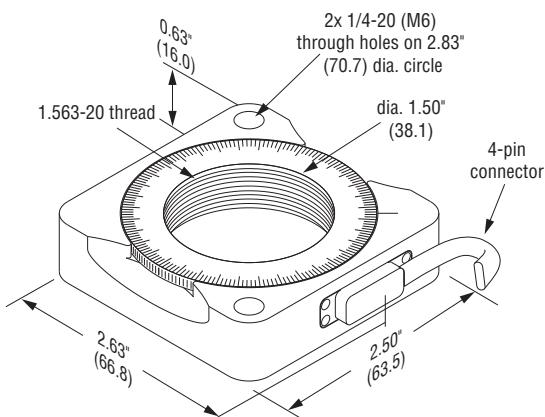

Model 8410

Recommended Motion Controllers

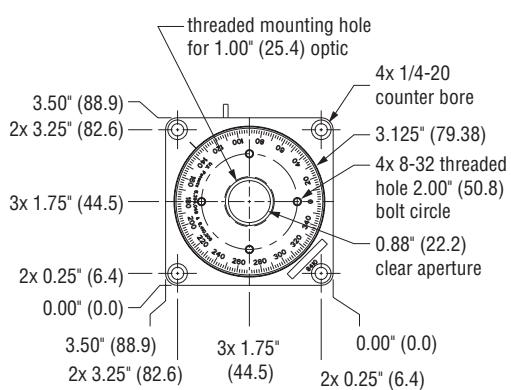

Model	Description
8742	Open-Loop Picomotor Controller & Driver Module, 4 Channels
8743-CL	Closed-Loop Picomotor Controller & Driver Module, 2 Channel

Note: Use 8742 for 8401 (-M) and 8743-CL for 8410
