Warranty

Newport Corporation warrants this product to be free from defects in material and workmanship for a period of 1 year from the date of shipment. If found to be defective during the warranty period, the product will either be repaired or replaced at Newport’s discretion.

To exercise this warranty, write or call your local Newport representative, or contact Newport headquarters in Irvine, California. You will be given prompt assistance and return instructions. Send the instrument, transportation prepaid, to the indicated service facility. Repairs will be made and the instrument returned, transportation prepaid. Repaired products are warranted for the balance of the original warranty period, or at least 90 days.

Limitation of Warranty

This warranty does not apply to defects resulting from modification or misuse of any product or part.

CAUTION

Warranty does not apply to damages resulting from:

- Incorrect usage:
  - Load on the stage greater than maximum specified load.
  - Carriage speed higher than specified speed.
  - Improper grounding.
    - Connectors must be properly secured.
    - When the load on the stage represents an electrical risk, it must be connected to ground.
  - Excessive or improper cantilever loads.
- Modification of the stage or any part thereof.

This warranty is in lieu of all other warranties, expressed or implied, including any implied warranty of merchantability or fitness for a particular use. Newport Corporation shall not be liable for any indirect, special, or consequential damages.

Service Form
EC Declaration of Conformity

BG Series

EC Declaration of Conformity
following Annex II-1A
of Directive 2006/42/EC on machinery

The manufacturer:
MICRO-CONTROLE Spectra-Physics,
9, rue du bois sauvage
F-91055 Evry FRANCE

Hereby declares that the machine:
• Description: "BG"
• Function: High Precision Goniometers
• Models: BGS30/80/ CC/ PP ; M /BGM120/160/200/ CC/ PP/ PE/ PEV6

– the technical file of which was compiled by:
Mr Dominique DEVIDAL, Quality Director,
MICRO-CONTROLE Spectra-Physics, Zone Industrielle - B.P.29
F-45340 Beaune La Rolande France

– complies with all the relevant provisions of the Directive 2006/42/EC on machinery.
– complies with all the relevant provisions of the Directive 2014/30/EU relating to electromagnetic compatibility.

– was designed and built in accordance with the following harmonised standards:
  • NF EN 61326-1:2013 « Electrical equipment for measurement, control and laboratory use – EMC requirements – Part 1: General requirements »
  • NF EN 55011:2010/A1:2011 Class A

was designed and built in accordance with the following other standards:
  • NF EN 61000-4-2
  • NF EN 61000-4-3
  • NF EN 61000-4-4
  • NF EN 61000-4-5
  • NF EN 61000-4-6

ORIGINAL DECLARATION

Done in Beaune La Rolande on 26 June 2015
Dominique DEVIDAL

DC1-EN rev-A
Definitions and Symbols

The following terms and symbols are used in this documentation and also appear on the product where safety-related issues occur.

General Warning or Caution

The exclamation symbol may appear in warning and caution tables in this document. This symbol designates an area where personal injury or damage to the equipment is possible.

The following are definitions of the Warnings, Cautions and Notes that may be used in this manual to call attention to important information regarding personal safety, safety and preservation of the equipment, or important tips.

---

**WARNING**

Warning indicates a potentially dangerous situation which can result in bodily harm or death.

---

**CAUTION**

Caution indicates a potentially hazardous situation which can result in damage to product or equipment.

---

**NOTE**

Note indicates additional information that must be considered by the user or operator.

---

European Union CE Mark

The presence of the CE Mark on Newport Corporation equipment means that it has been designed, tested and certified as complying with all applicable European Union (CE) regulations and recommendations.

---

**WARNINGS AND CAUTIONS**

**ATTENTION**

This stage is a Class A device. In a residential environment, this device can cause electromagnetic interference. In this case, suitable measures must be taken by the user.
Warnings

WARNING
The motion of objects of all types carries potential risks for operators. Ensure the protection of operators by prohibiting access to the dangerous area and by informing the personnel of the potential risks involved.

WARNING
Do not use this stage when its motor is emitting smoke or is unusually hot to the touch or is emitting any unusual odor or noise or is in any other abnormal state.
Stop using the stage immediately, switch off the motor power and then disconnect the electronics power supply.
After checking that smoke is no longer being emitted contact your Newport service facility and request repairs. Never attempt to repair the stage yourself as this can be dangerous.

WARNING
Make sure that this stage is not exposed to moisture and that liquid does not get into the stage.
Nevertheless, if any liquid has entered the stage, switch off the motor power and then disconnect the electronics from power supply.
Contact your Newport service facility and request repairs.

WARNING
Do not insert or drop objects into this stage, this may cause an electric shock, or lock the drive.
Do not use this stage if any foreign objects have entered the stage.
Switch off the motor power and then disconnect the electronics power supply.
Contact your Newport service facility for repairs.

WARNING
Do not attempt to modify this stage; this may cause an electric shock or downgrade its performance.

WARNING
Do not exceed the usable depth indicated on the mounting holes (see section “Dimensions”). Longer screws can damage the mechanics or cause a short-circuit.
Cautions

---

**CAUTION**

Do not place this stage in a hostile environment such as X-Rays, hard UV,… or in any vacuum environment.

---

**CAUTION**

Do not place this stage in a location affected by dust, oil fumes, steam or high humidity. This may cause an electric shock.

---

**CAUTION**

Do not leave this stage in places subject to extremely high temperatures or low temperatures. This may cause an electric shock.

- Operating temperature: +10 to +35 °C
- Storage temperature: -10 to +40 °C (in its original packaging)

---

**CAUTION**

Do not move this stage if its motor power is on.

Make sure that the cable to the electronics is disconnected before moving the stage. Failure to do so may damage the cable and cause an electrical shock.

---

**CAUTION**

Be careful that the stage is not bumped when it is being carried. This may cause it to malfunction.

---

**CAUTION**

When handling this stage, always unplug the equipment from the power source for safety.

---

**CAUTION**

When the carriage is in its end-of-run position, it is strongly recommended not to go beyond this point as this may damage the stage mechanism.

---

**CAUTION**

Contact your Newport service facility to request cleaning and specification control every year.
1.0 Introduction

This manual provides operating instructions for the BG series goniometric cradles:

- (M-)BG-M-PP
- (M-)BG-M-PE
- (M-)BG-M-PEV6
- (M-)BG-M-CC
- BG-S-PP
- BG-S-CC

(M-) indicates that imperial and metric interface versions are available (e.g. BGM160PE and M-BGM160PE). Mechanical and electrical characteristics are identical for both models.

2) REMARK

Vacuum compatible goniometric cradles to 10⁻⁶ hPa. In this case, max. speed and load capacity have to be divided by two.

BGS50CC, BGS80PP and BGM120PP goniometric cradles.

RECOMMENDATION

We recommend you read carefully the chapter “Connection to electronics” before using the BG goniometric cradle.

Adjacent sizes of BG cradles can easily be stacked to provide orthogonal 2 axis rotation around a fixed point.
BG Series goniometric cradles rotate on a transverse axis above the platform. Compared to full 360° rotation stages, they offer maximum access to the rotating part and allow construction of very compact multi-axis rotation assemblies. BG cradles are designed so that orthogonal mounting of two adjacent-sized cradles (e.g., BGS50 and BGS80) provides two perpendicular axes of rotation at about the same point in space. Mounting a rotation stage under the assembly adds a third orthogonal rotation axis through the same point.

Precise rotation is ensured by a precision ground, hardened worm gear drive. Single-row ball bearings and precision-ground tool-steel races ensure smooth rotation with minimal wobble and eccentricity. A home switch, conveniently located at center of travel, facilitates the return of the platform to a level position.

BG Series goniometric cradles are available in 5 sizes and may be configured with DC motors or stepper motors. The selection of the motorization is dependent on the application.

**NOTE**

This product complies with the RoHS directive (Restriction of Hazardous Substances).
3.0 Characteristics

3.1 Definitions
Specifications of our products are established in reference to ISO 230 standard part II “Determination of accuracy and repeatability of positioning numerically controlled axes”.

This standard gives the definition of position uncertainty which depends on the 3 following parameters:

(Absolute) Accuracy
Difference between ideal position and real position.

On-Axis Accuracy
Difference between ideal position and real position after the compensation of linear errors.

Linear errors include: cosine errors, inaccuracy of screw or linear scale pitch, angular deviation at the measuring point (Abbe error) and thermal expansion effects. All Newport motion electronics can compensate for linear errors.

The relation between absolute accuracy and on-axis accuracy is as follows:

\[
\text{Absolute Accuracy} = \text{On-Axis Accuracy} + \text{Correction Factor} \times \text{Travel}
\]

Repeatability
Ability of a system to achieve a commanded position over many attempts.

Reversal Value (Hysteresis)
Difference between actual position values obtained for a given target position when approached from opposite directions.

Minimum Incremental Motion (MIM or Sensitivity)
The smallest increment of motion a device is capable of delivering consistently and reliably.

Resolution
The smallest increment that a motion device can theoretically move and/or detect. Resolution is not achievable, whereas MIM, is the real output of a motion system.

Eccentricity
Displacement of the geometric center of a rotation stage from the rotation axis in the plane defined by bearings.

Wobble
Tilt of rotation axis during rotation of a stage, measured on a reference surface.

The testing of on-axis accuracy, repeatability, and reversal error are made systematically with test equipment in an air-conditioned room (20±1 °C).

A linear cycle with 21 data points on the travel and 4 cycles in each direction gives a total of 164 points.
Guaranteed Specifications

Guaranteed maximum performance values are verified per Newport’s A167 metrology test procedure. For more information, please consult the metrology tutorial section in the Newport catalog or at www.newport.com

CAUTION

To reach specifications stated, stages must be fixed on a plane surface with a flatness of 5 µm.

3.3 Load Specification Definitions

Normal Load Capacity (Cz)

Maximum load a rotation stage can move while maintaining specifications. This value is given with speed and acceleration specified for each rotation stage, and with a load perpendicular to bearings.

Off-Centered Load (Q)

Maximum cantilever-load a rotation stage can move: Q ≤ Cz + (1 + D/a)

D: Cantilever distance.

3.4 Load Characteristics and Stiffness

</tr>
</tbody>
</table>

The weight variation between drive units is not very significant.

4.0 Drive

4.1 Stepper Drive Versions

Stepper motor-driven stages are available in 2 versions:

- The mini-step drive version (PP) enables high angular speed up to 20 °/s. The larger models, BG M120PP to BG M200PP, feature a worm mounted rotary encoder for improved accuracy and repeatability. The encoder also provides a method for detecting motor stalling, an important feature for applications with loads or high torques.

  The BG S50PP and BG S80PP are not equipped with an encoder. Instead, position is attained by the number of commanded steps and micro-steps. The high output torque of the stepper motor, combined with extensive performance tests, ensures position accuracy as long as the recommended load and torque are not exceeded. The BG S50PP and BG S80PP provide very high motion sensitivity with good linearity between commanded micro-steps and the actual motion of the stage at a very reasonable price.

- The full-step version (PE) is equipped with a reduction gear providing higher torque. This version is only available on the models BG M120 to BG M200 and is recommended for high inertia payloads and vacuum applications.
Mini-Step Drive

Is used for stepper motors, when 1 pulse emitted by electronic corresponds to theoretical physical motion of a fraction of a full step of the motor.

For these goniometric cradles a mini-step equals 1/10 of a full step.

Full-Step Drive

Is used for stepper motors, when 1 pulse emitted by electronic corresponds to theoretical physical motion of 1 full step of the motor.

**DC-Servo Drive Versions**

DC motor-driven stages use 3 different motors and encoders depending on the size of the cradle:

- The BGS50CC uses a miniature DC servo motor with a motor mounted rotary encoder, a reduction gear and a belt drive in order to fold the motor. The result is a very small and lightweight package providing very high resolution output and great minimum incremental motion capability. However, reversibility is compromised due to some backlash and hysteresis in the reduction gear and belt drive system.

- The BGS80CC features a high resolution 4,000 cts/rev rotary encoder with index pulse for precision homing and is the recommended choice for applications requiring accurate bi-directional positioning. For tightest position control, the rotary encoder is directly mounted on the worm screw. This avoids the majority of drive train error sources that affect other stages with indirect position read-out.

- The BGM120CC to BGM200CC use higher-torque DC servo motors. The motor also features a built-in tachometer to provide superior speed stability.

5.4 Command Signals for the DC-Motor

In the above drawings, + Motor signal is referred to – Motor signal, + Tacho Generator signal is referred to – Tacho Generator signal.

1. When the stage moves in + Direction, the + Motor voltage is higher than – Motor voltage, and + Tacho Generator voltage is higher than – Tacho Generator voltage.

2. When the stage moves in – Direction, the + Motor voltage is lower than – Motor voltage, and + Tacho Generator voltage is lower than – Tacho Generator voltage.
5.5 Sensor Position

End-of-Run and Mechanical Zero are 5 V open collector type.

The Index Pulse provides a repeatable Home Position at ±1 step.

CAUTION

“End-of-Run” and “Mechanical Zero” are active signals and should not be connected to any other source.

5.6 Feedback Signal Position

The incremental sensor consists of an optical scale and an encoder head. When the carriages of the stage move, the encoder head generates square signals in quadrature, sent to pins #19, #20, #23 and #24 of the SUB-D25 connector.

“Encoder” and “Index Pulse” are “differential pair” (type RS-422) type output signals. Using these signals permits a high immunity to noise. Emission circuits generally used by Newport are 26LS31 or MC3487. Reception circuits to use are 26LS32 or MC3486.
5.7 BGS Pinouts

The SUB-D25 connection at the end of the cable for the BGS goniometric cradles, is given in the following tables:

6.0 Connection to Newport Controllers

6.1 Warnings on Controllers
Controllers are intended for use by qualified personnel who recognize shock hazards and are familiar with safety precautions required to avoid possible injury. Read the controller user’s manual carefully before operating the instrument and pay attention to all written warnings and cautions.

WARNING
Disconnect the power plug under the following circumstances:

• If the power cord or any attached cables are frayed or damaged in any way.
• If the power plug is damaged in any way.
• If the unit is exposed to rain, excessive moisture, or liquids are spilled on the unit.
• If the unit has been dropped or the case is damaged.
• If you suspect service or repair is required.
• Whenever you clean the electronics unit.

CAUTION
To protect the unit from damage, be sure to:

• Keep all air vents free of dirt and dust.
• Keep all liquids away from the unit.
• Do not expose the unit to excessive moisture (85% humidity).
• Read this manual before using the unit for the first time.

WARNING
All attachment plug receptacles in the vicinity of this unit are to be of the grounding type and properly polarized.

Contact your electrician to check your receptacles.

WARNING
This product is equipped with a 3-wire grounding type plug.

Any interruption of the grounding connection can create an electric shock hazard.

If you are unable to insert the plug into your wall plug receptacle, contact your electrician to perform the necessary alterations to ensure that the green (green-yellow) wire is attached to earth ground.

WARNING
This product operates with voltages that can be lethal.

Pushing objects of any kind into cabinet slots or holes, or spilling any liquid on the product, may touch hazardous voltage points or short out parts.
6.2 Connection

On each goniometric cradle is represented a label which indicates its name and its serial number.

---

**WARNING**

Always turn the controller’s power OFF before connecting to a stage.

---

Stages may be connected to the rear panel motor connectors any time prior to power-up with the supplied cable assemblies.

---

**NOTE**

These stages are ESP compatible. Enhanced System Performance is Newport’s exclusive technology that enables Newport ESP motion controllers to recognize the connected Newport ESP stage and upload the stage parameters. This ensures that the user can operate the motion system quickly and safely.

---

6.3 Cables

Our goniometric cradles are delivered with a 3-meter cable.

This cable is linked to the body of the stage for the BGS50 goniometric cradles.

Other stages are delivered with a separate MMCABLE-3, MSCABLE-3 or MCAB-3 cable according to the goniometric cradle you bought. This cable is equipped with a SUB-D25M connector so it can be directly connected to our controllers/drivers.

The cable supplied with your goniometric cradle is given in the following table:

<table>
<thead>
<tr>
<th>Model</th>
<th>Drive</th>

</tr>
</tbody>
</table>
6.4 MMCABLE-3 Cable

**WARNING**

This cable is shielded correctly. For a correct operation, make sure to lock connectors (ground continuity provided by the cable).

For applications where the standard 3-meter cable (MMCABLE-3) included with your stage is not adequate, Newport offers longer length cables designed to ensure the integrity of your positioning application.

These cables are specially shielded and terminated with Newport's standard SUB-D25 connectors. They are available in 5-m (MMCABLE-5), 7-m (MMCABLE-7) or 10-m (MMCABLE-10) lengths.

**WARNING**

Keep the motor cables at a safe distance from other electrical cables in your environment to avoid potential cross talk.

For cable lengths in excess of 3 meters, we recommend the MMCABLE-REG to ensure a high quality, regulated 5 V supply to the stages.

This regulator is available as an option. Please note that for best efficiency, this regulator should be attached to the stage to re-adjust the 5 V coming from the controller through the long cable.
6.5 MSCABLE-3 Cable

<table>
<thead>
<tr>
<th>BENDING</th>
</tr>
</thead>
<tbody>
<tr>
<td>STATIC CABLE: ≥ 0.94 (24)</td>
</tr>
<tr>
<td>CABLE IN MOTION: ≥ 2.76 (70)</td>
</tr>
</tbody>
</table>

**WARNING**

This cable is shielded correctly. For a correct operation, make sure to lock connectors (ground continuity provided by the cable).

For applications where the standard 3-meter cable (MSCABLE-3) included with your stage is not adequate, Newport offers a 10-m longer length cable (MSCABLE-10) designed to ensure the integrity of your positioning application.

**REMARK**

The cross section of the MSCAB-10 cable is different from the one of the MSCABLE-3 cable to allow a longer length. The MSCAB-10 cable has the same mechanical properties as the MCAB-10 cable.

These cables are specially shielded and terminated with Newport’s...
### 6.6 MCAB-3 Cable

![Image of MCAB-3 Cable with connectors and dimensions]

**WARNING**

This cable is shielded correctly. For a correct operation, make sure to lock connectors (ground continuity provided by the cable).

For applications where the standard 3-meter cable (MCAB-3) included with your stage is not adequate, Newport offers longer length cables designed to ensure the integrity of your positioning application.

These cables are specially shielded and terminated with Newport’s standard SUB-D25 connectors. They are available in 5-m (MCAB-5), 7-m (MCAB-7) or 10-m (MCAB-10) lengths.

**WARNING**

Keep the motor cables at a safe distance from other electrical cables in your environment to avoid potential cross talk.
7.0 Connection to Non-Newport Electronics

7.1 Connections

**WARNING**

Newport is not responsible for malfunction or damage to a BG goniometric cradle when it is used with non-Newport controllers.

**WARNING**

Newport guarantees “CE” compliance of the BG goniometric cradles only if they are used with Newport cables and controllers.

Nevertheless, the figure below shows the wiring when a BG goniometric cradle is used with non-Newport controllers.

“Encoder” and “Index Pulse” are “differential pair” (type RS-422) type output signals. Using these signals permits a high immunity to noise. Emission circuits generally used by Newport are 26LS31 or MC3487. Reception circuits to use are 26LS32 or MC3486.
8.0 BGM Goniometric Cradles Assembly Pattern

Stacking BG goniometric cradles either together or with other Newport stage is easily accomplished. Below are example schematics of the assembly patterns used. For BGM stages, these interfaces are accessed by unscrewing and removing the upper and/or lower plates of the stages (see dimension drawings).

NOTE
To access the interface holes of the carriage, simply move the bottom stage to its extreme position. Two c’bored holes will be accessible from one end of travel and the other two holes will be accessible from the other end of travel. For example, between the BGM160 and BGM200, use the M6 holes in a 6.14 x 3.62 (156 x 92 mm) pattern. BGS80 on BGM120, use M4 holes in a SQR 1.89 (48 mm) pattern.

To access the mounting holes, move the bottom stage carriage to one end of travel. The 2 x M4 c’bores on the BGM120 carriage will now be accessible. Install the M4 SHCS, and tighten - finger-tight only. Move the carriage to the other end of travel and access the other 2 x M4 holes (SQR 1.89 (48 mm) pattern). Install the other 2 M4 SHCS. Visually inspect the orthogonality and tighten using an Allen wrench. Move to the previous end of travel and tighten the two screws with an Allen wrench.

10.0 Maintenance

RECOMMENDATION
It is recommended to contact our After Sales Service which will know to define the appropriate maintenance for your application.

10.1 Maintenance
The BG goniometric cradle requires no particular maintenance. Nevertheless, this is a precision mechanical device that must be kept and operated with caution.

PRECAUTIONS
The BG goniometric cradle must be used or stocked in a clean environment, without dust, humidity, solvents or other substances.

RECOMMENDATION
It is recommended to return your BG goniometric cradle to Newport's After Sales Service after every 2000 hours of use for lubrication. If your goniometric cradle is mounted on a workstation and cannot be easily removed, please contact Newport's After Sales Service for further instructions.

10.2 Repair

CAUTION
Never attempt to disassemble a component of the goniometric cradle that has not been covered in this manual.

To disassemble a non specified component can cause a malfunction of the stage.

If you observe a malfunction in your goniometric cradle, please contact us immediately to arrange for a repair.

CAUTION
Any attempt to disassemble or repair a BG goniometric cradle without prior authorization will void your warranty.

10.3 Calibration

CAUTION
It is recommended to return your BG goniometric cradle to Newport once a year for recalibration to its original specifications.
