Checking oil: examine oil bubble level at back of compressor
Checking oil: examine oil bubble level at back of compressor
Adding oil: Oil is added at back of ACWS compressor via tube that sticking out.
Adding oil: Tube is initially covered with rubber cover/stopper that needs to be removed. Picture below has no rubber cover.
Adjusting pressure: ARF unit attached on front of ACWS compressor regulates pressure. The compressor should be supplying a maximum

Lift up & turn this knob to regular pressure. Push down to lock in pressure.
