Leveraging Newport’s expertise in high-precision stages and motion control, we now offer motion simulators for the accurate calibration and testing of Inertial Guidance Sensors or MEMS devices, whether in a research setting or in a production environment.

Newport’s standard Direct Drive Rotation stages are high dynamic performance rotation stages and are optimized to address high throughput needs. The design leverages over 50 years of expertise in supplying motion control equipment to various industries that demand high precision motion.

Complementing the robust rotary stages is the XPS Universal Controller, a powerful and feature-rich controller with integrated drivers, making it very easy to configure, use and program. Multiple digital and analog I/O’s, triggers and synchronization make the XPS more than suitable in motion simulator applications.

**Controller**
- Integrated controller and driver for minimal setup
- Ethernet Communication Interface for remote monitoring of process
- TCL scripting for real time execution of programs
- Multiple Digital and Analog I/O’s
- Interlock for safety

**Options**
- Slip rings
- Brakes

**General Simulator Specifications**
